Thematic strands 2025-2026

2025 - I

Thematic Strand 1

Entrepreneurial Skills and Mindsets in Education

Report on Thematic Strand 1 available!

2025 - II

Thematic Strand 2

Bridging the Innovation Gap in Higher Education

To be published in March 2026

2026 - I

Thematic Strand 3

Education for Green and Digital Innovation

2026 - II

Thematic Strand 4

Lifelong Learning for an Innovative Workforce

Thematic strand 3

Education for Green and Digital Innovation

Webinar topics:

- Twin Transition – Understanding the Why and Building the How (Mar. 05),
- Educating to Thrive in the Digital World (Apr. 29),
- Capacity-building for Leading Sustainability in Education (Jun. 10).

Study visit

- New Bulgarian University, Sofia (July 2026).

Calls for good practices & polls

- Share your **good practices** on Education for Green and Digital Innovation.
- Take our quick semester **poll** and share your insights.

Thematic report

- Summarises thematic strand activities.

Agenda

15:30 Welcome & introduction

15:40 **Intervention 1** – Towards a green and digital future: Key requirements for successful twin transitions in the European Union, Stefan Muench.

16:00 **Intervention 2** – Twinning green and digital without widening gaps: A place-based framework from ST4TE, Christina Kakderi.

16:20 **Intervention 3** – When Machines Think, the Planet Shouldn't Pay, Morten Dæhlen.

16:40 Interactive debate with speakers

16:55 Closing remarks

Objective

Examine the synergy between digital transformation and sustainability in higher education.

Key objectives

- Requirements for successful twin transitions.
- Place-based frameworks for fair transitions.
- Twin transition interdisciplinary actions.

Stefan Muench

Head of Strategic Intelligence,
Joint Research Centre (JRC)

Intervention 1

Towards a green and digital future: Key requirements for successful twin transitions in the European Union

- Specialises in strategic foresight and decision-making under uncertainty, with a core focus on navigating the 'Twin Transition.'
- He has authored several high-level reports on the requirements for successful transitions and future-proof skills within the European Union.
- He holds a PhD in Sustainability Management, Sustainable Development, and Energy Technology Assessment from the Dresden University of Technology.

TOWARDS
**A GREEN &
DIGITAL
FUTURE**

European
Commission

The JRC report underpins the European Commission's Strategic Foresight Report

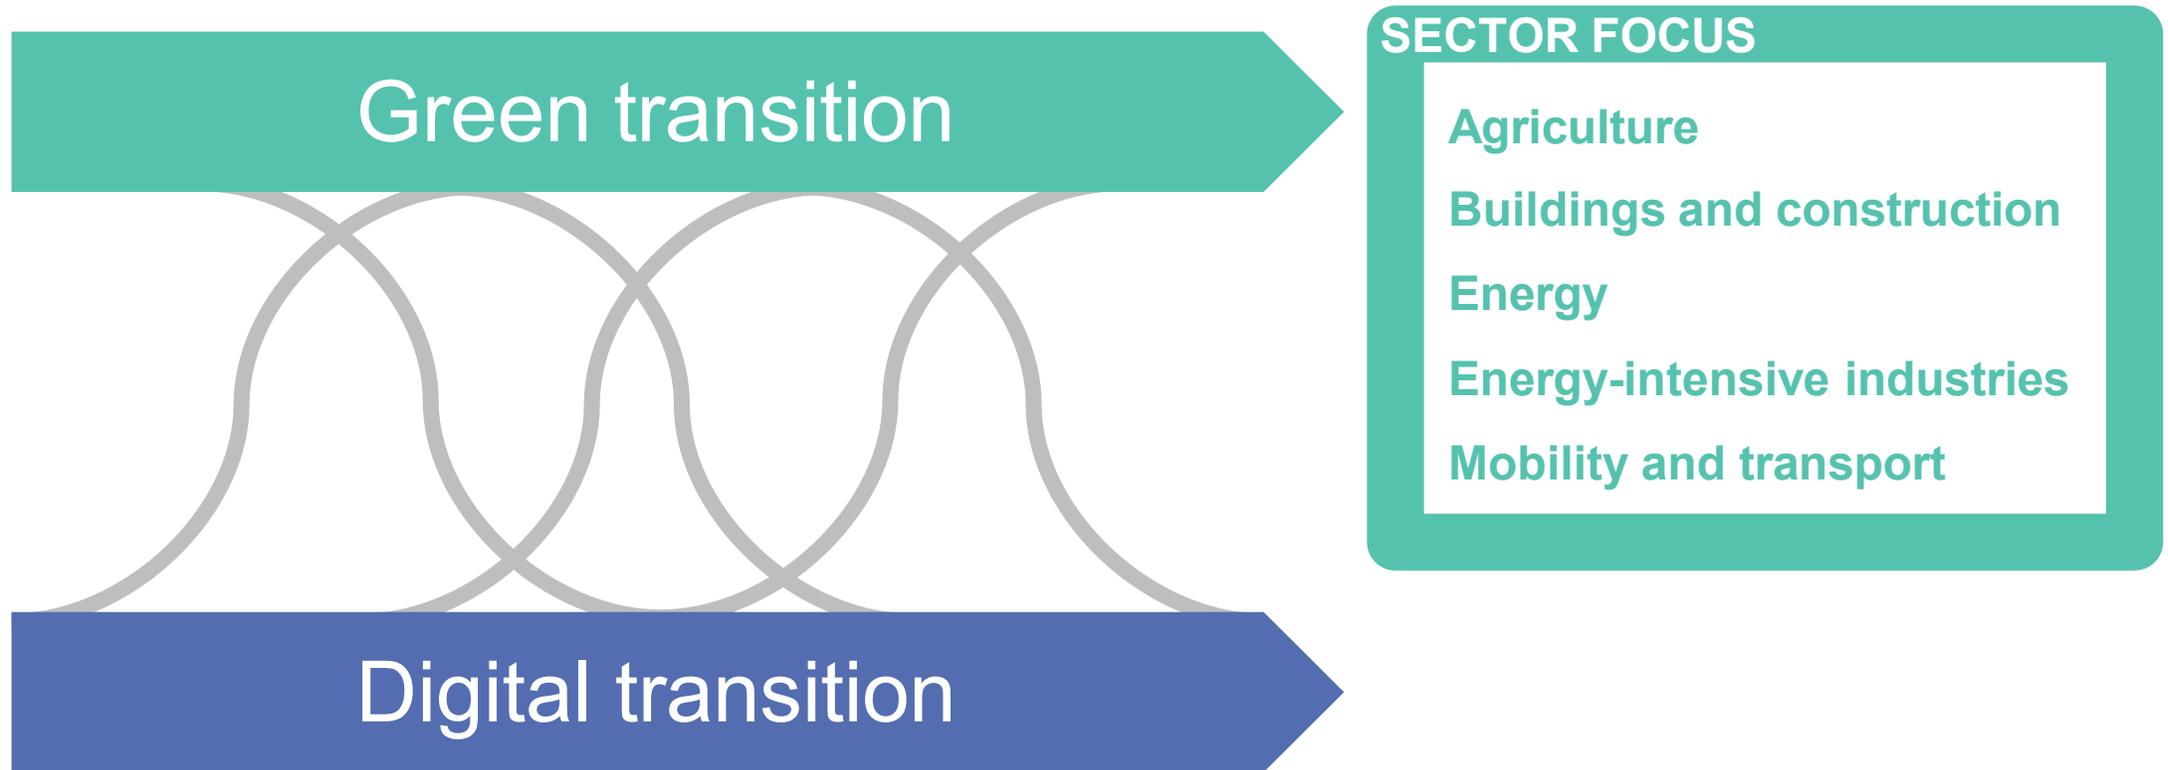

Science for Policy Report

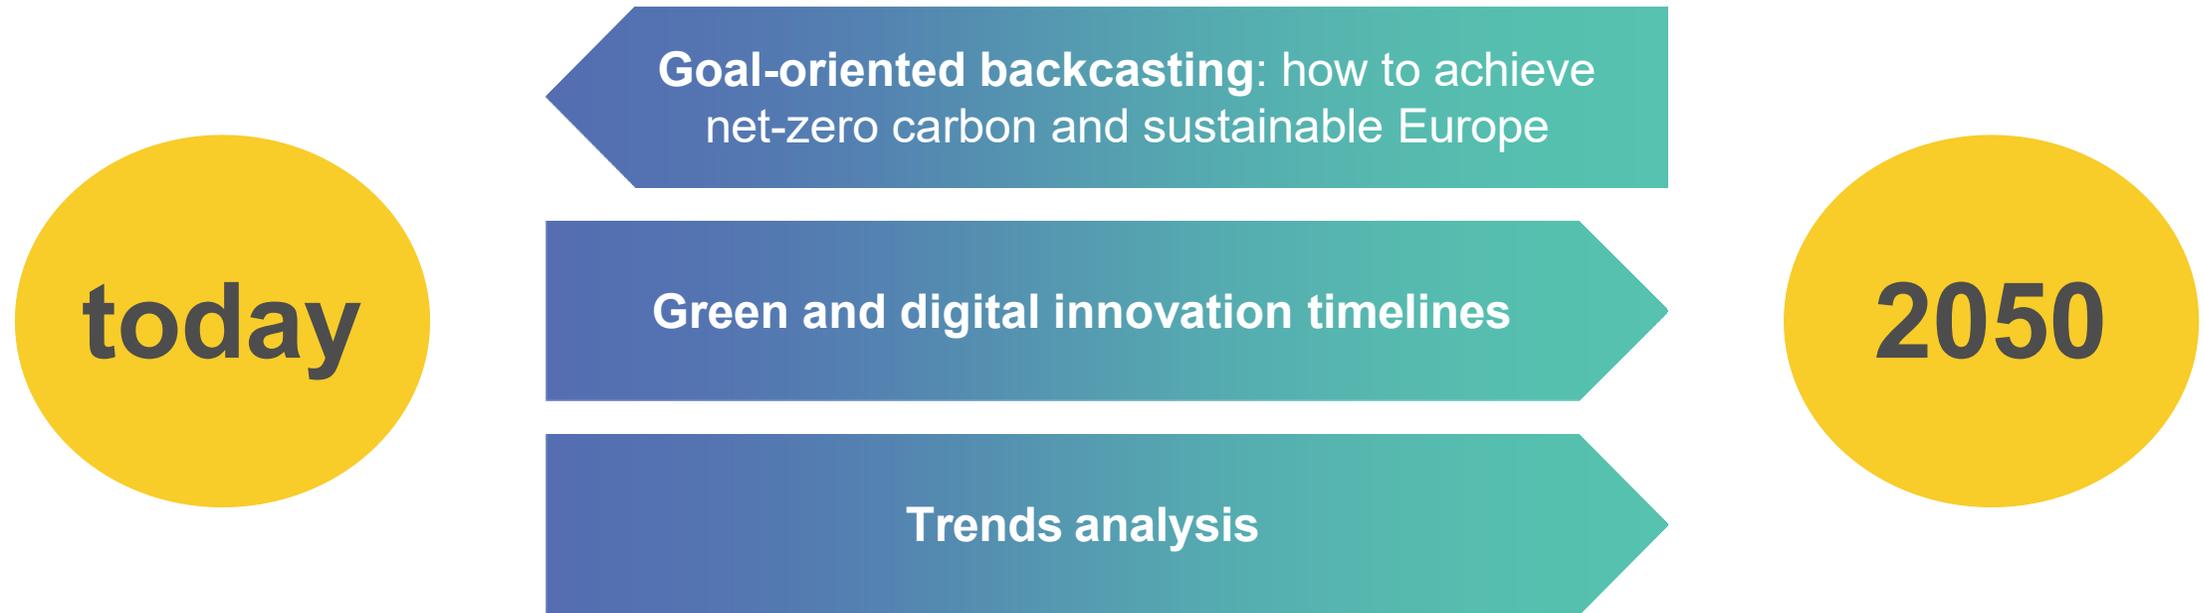

Communication

How can the green and digital transitions reinforce each other?

Foresight methods fueled the future-oriented analysis

Stakeholders and experts were consulted throughout the process

Over 200 participants

Industry

Cross-cutting

Academia & research

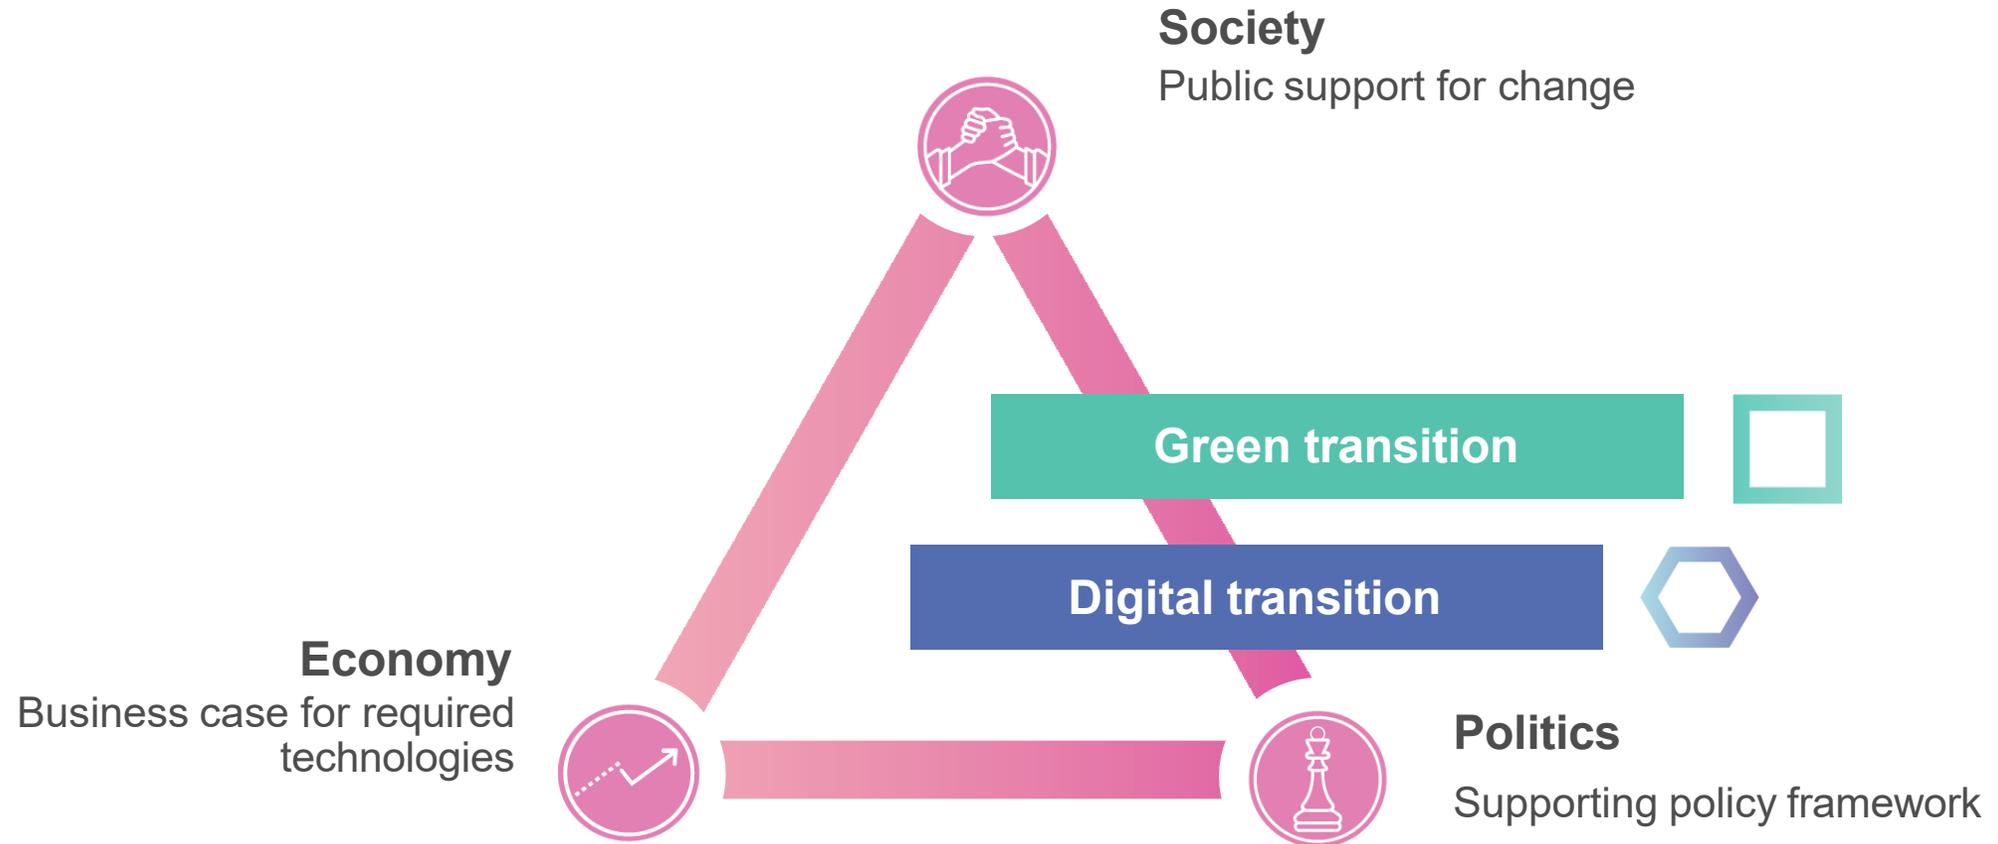

Non-governmental and social partners

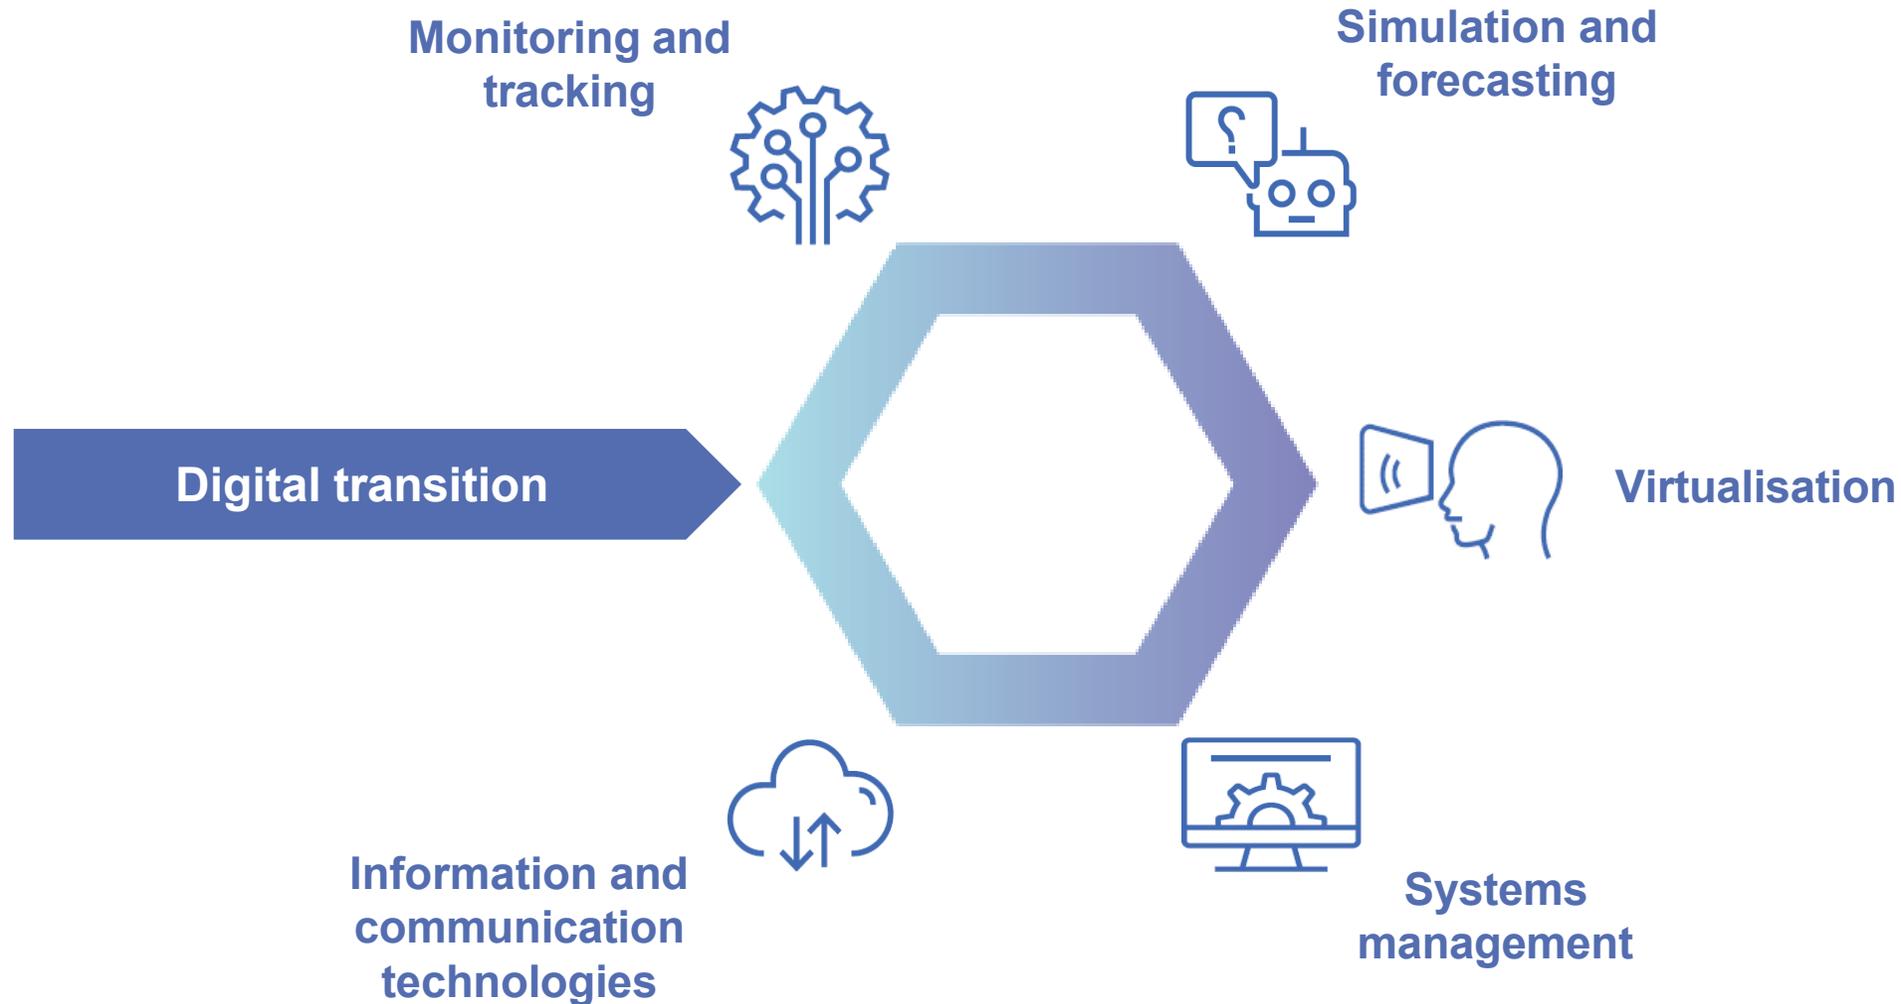

EU institutions, agencies, and bodies

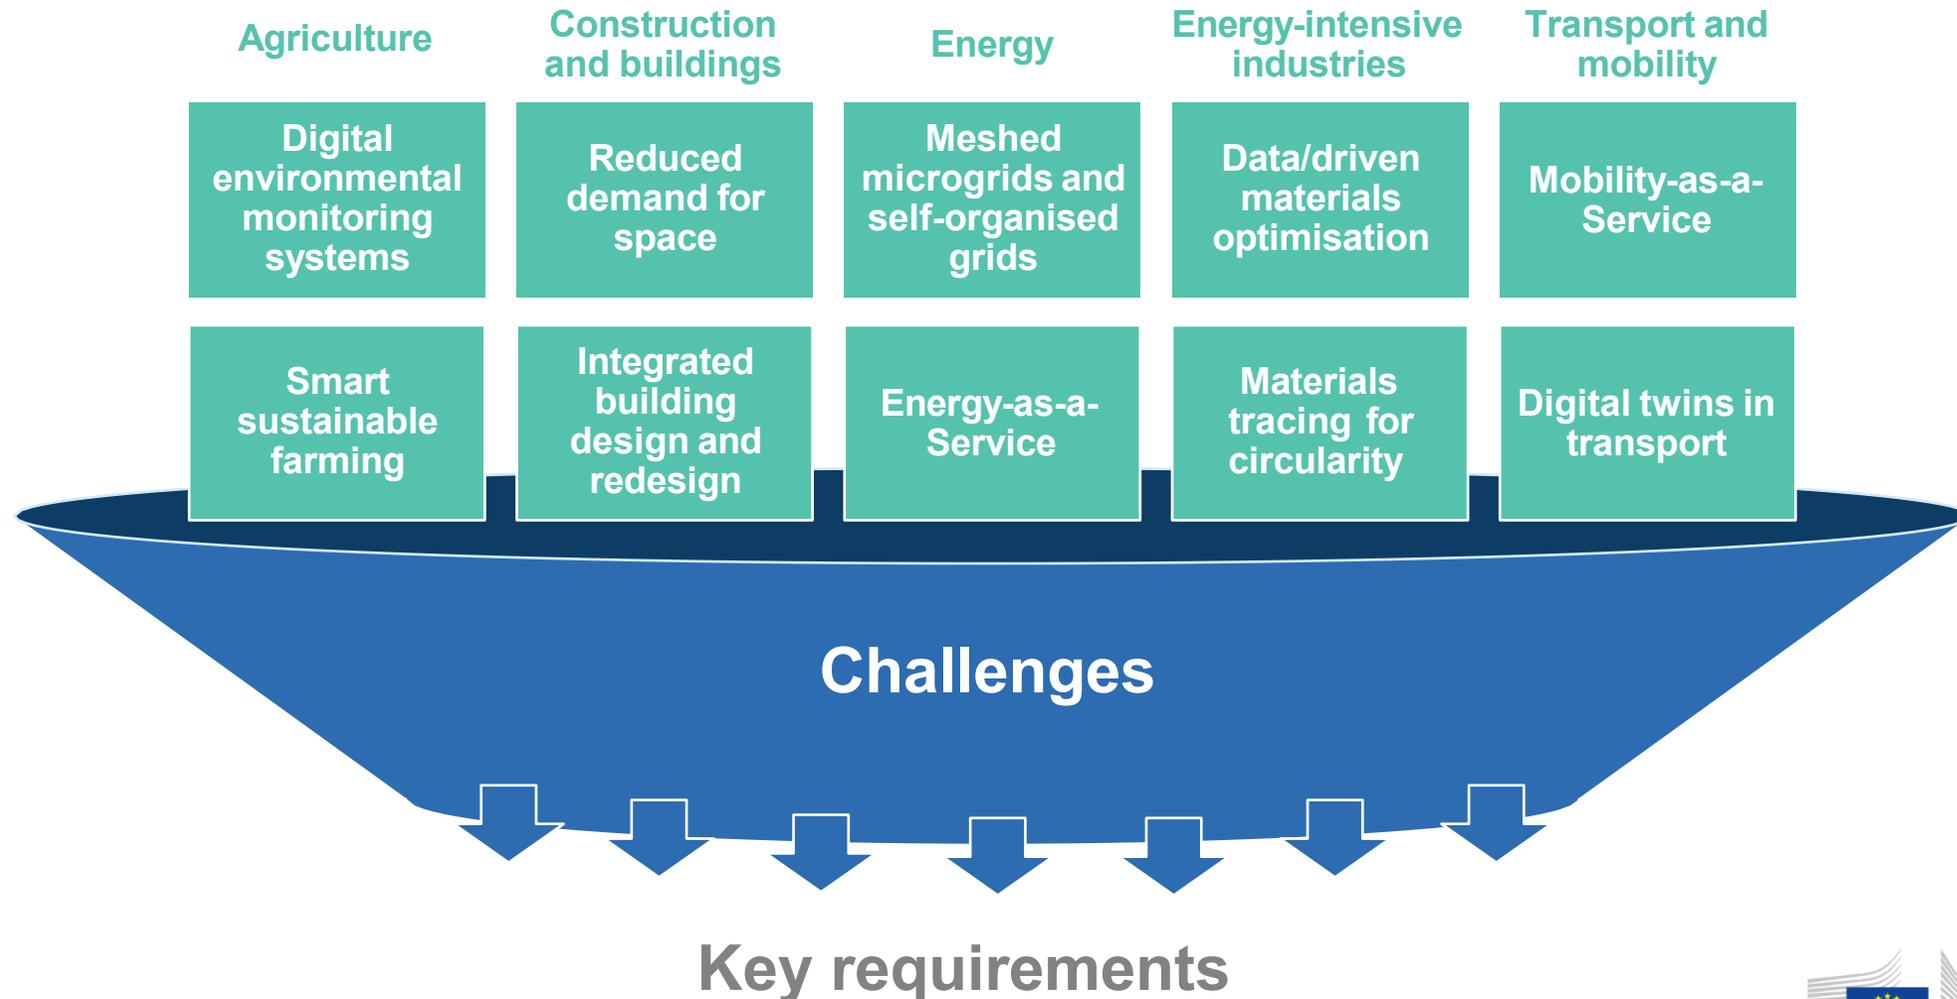

Contextual factors can determine success

Digital technologies can catalyse the green transition

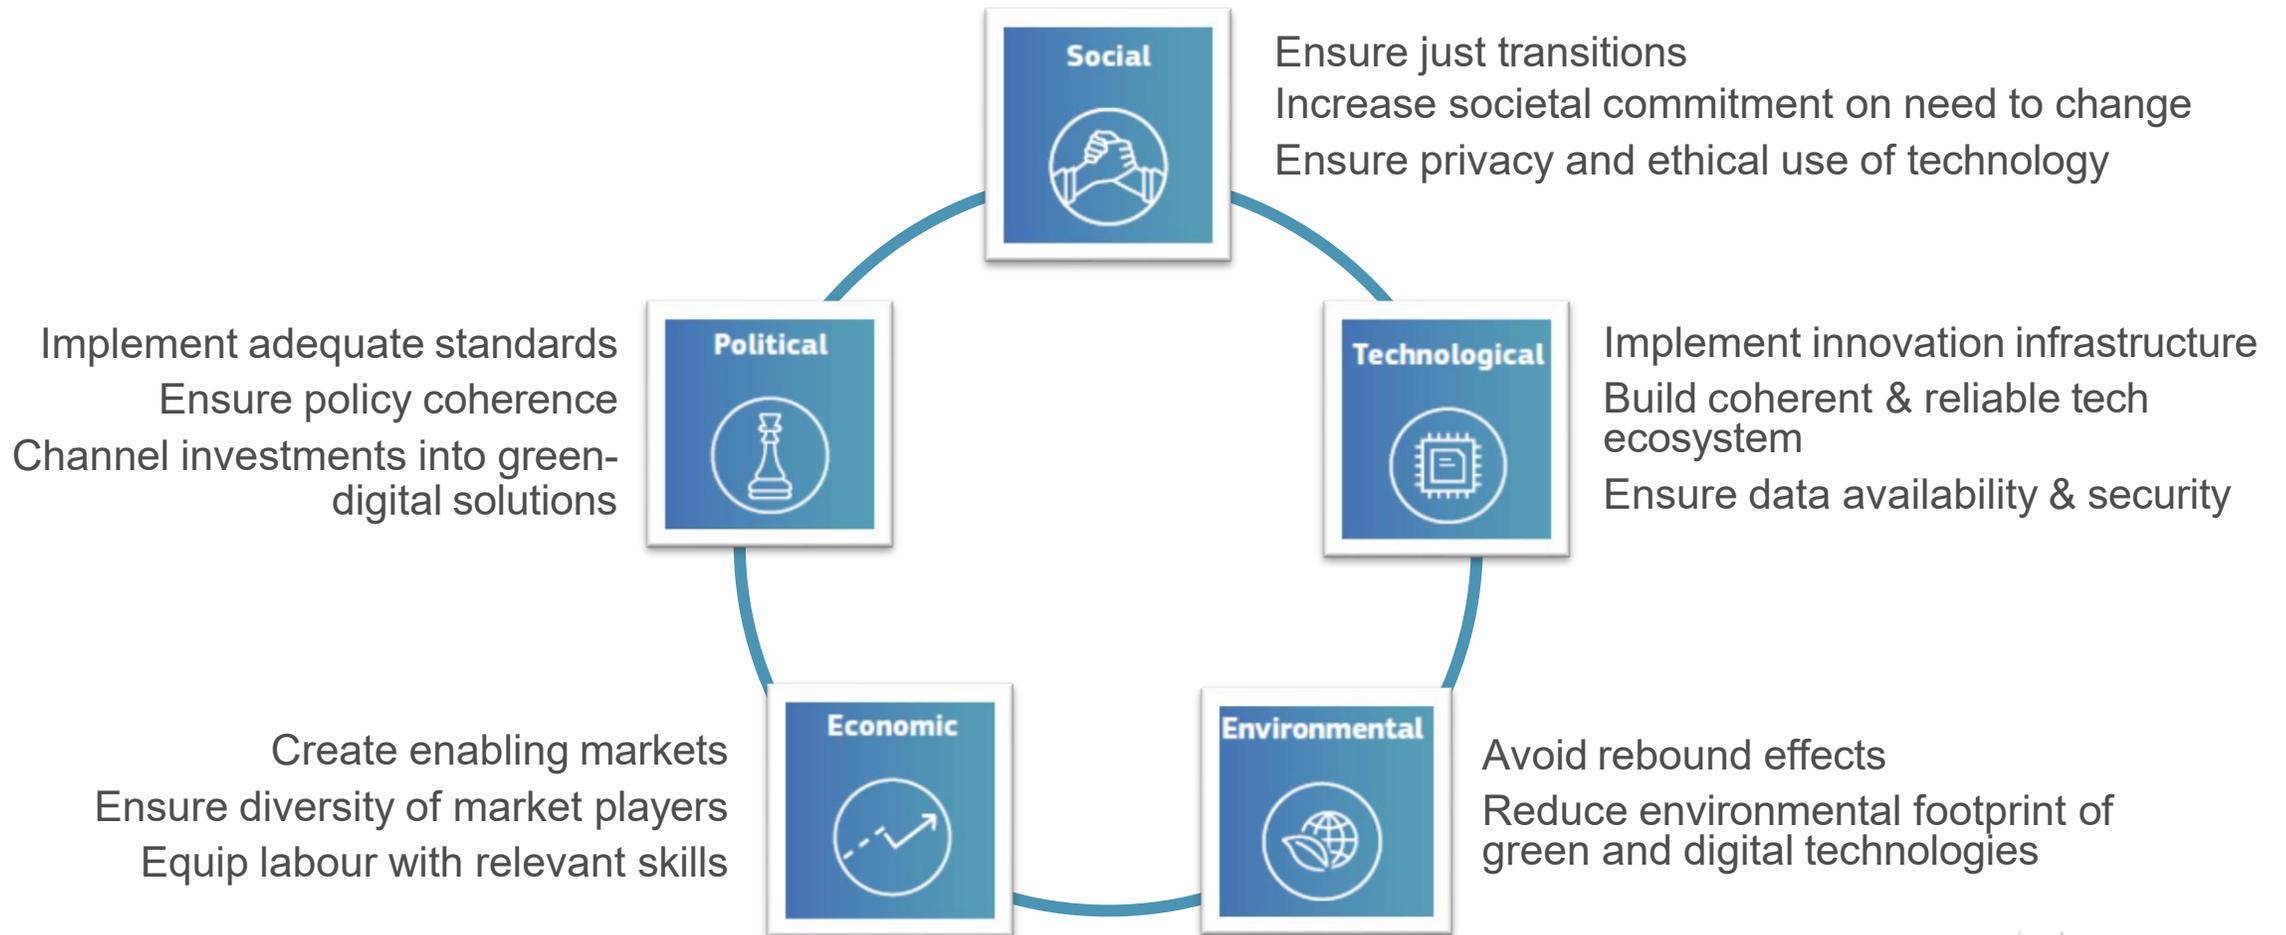

Case studies of green-digital solutions indicated cross-cutting challenges

There are key requirements we need to achieve successful twin transitions

Research on implementing the twin transitions should continue

- Developing green-digital interlinkages requires balancing their advantages & disadvantages
- Call for frugal innovation – where do digital technologies bring the most added value?
- The twin transitions need transdisciplinary research

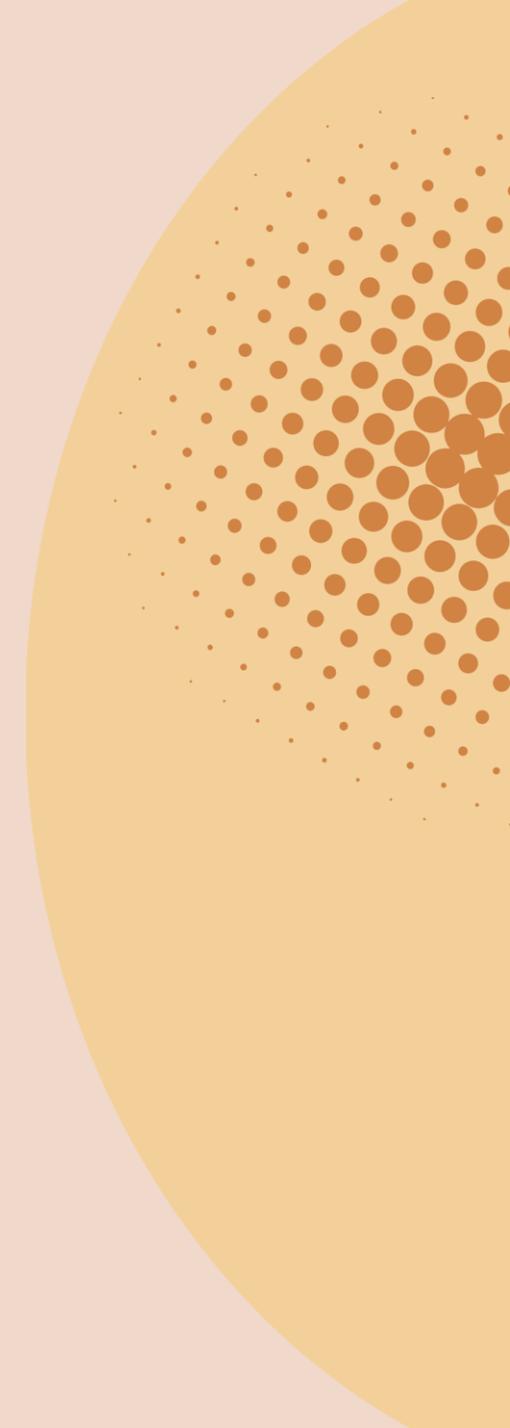

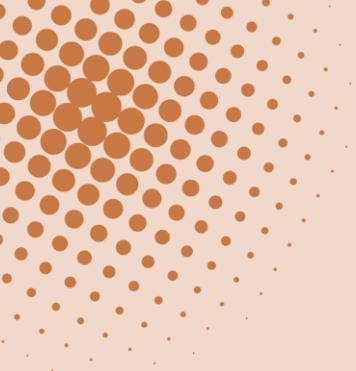

Thank you

Intervention 1

Twinning green and digital without widening gaps: A place-based framework from ST4TE

- Associate Professor of Spatial Development and Innovation Systems and Coordinator of the Horizon Europe project ST4TE.
- Her research bridges academic theory and policy practice, focusing on the socio-spatial dimensions of the twin (green-digital) transition and how place-based innovation can make it fair and inclusive.
- She advises city and regional administrations and EU-level organisations, including the European Commission, on innovation and digital transformation strategies.

From twin transition ambition to inclusive capacity:

lessons from ST4TE for higher education and regional policy

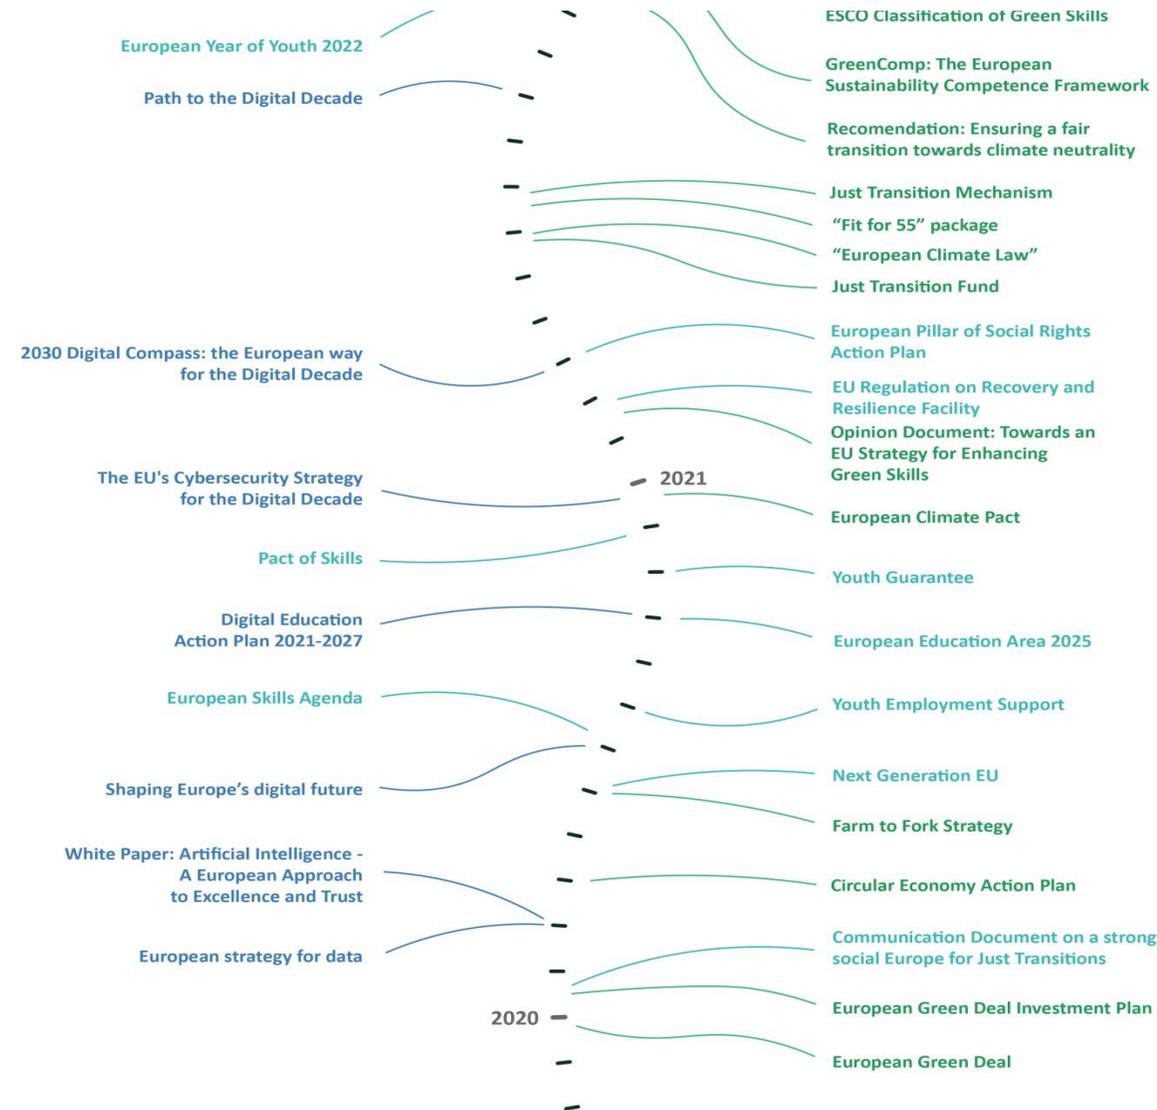

Thematic Strand 3: Twin Transition – Understanding the Why and Building the How

Christina Kakderi
Online, 05 March 2026

A Just Twin Transition Needs Inclusive Capacity: The Human and Spatial Geography

- **European ambition is high, but implementation remains fragmented.**
- **Green and digital policy streams still often run in parallel rather than as one integrated transition.**
- **The main risks are not only technological, but also territorial, distributional, and experiential.**
- **If capacities remain unevenly distributed, the twin transition will reproduce — not reduce — existing gaps.**

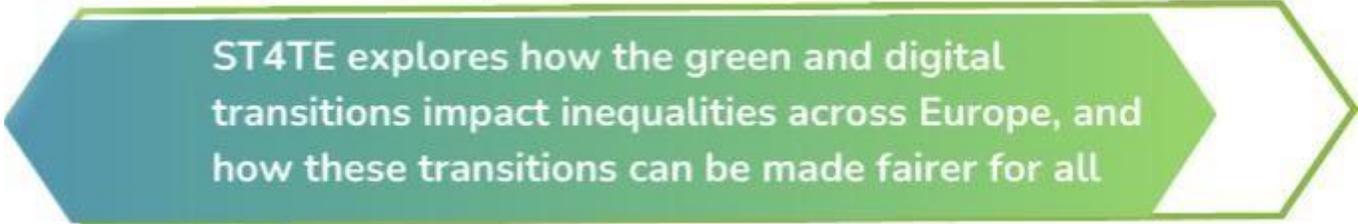

What ST4TE Adds: A Place-Based Diagnostic Lens

- **A Justice Lens:** Examining where green and digital change may widen territorial and social inequalities.
- **Mixed-Methods Evidence:** Integrating macro-level regional mapping and occupational data with 402 in-depth qualitative interviews across Europe.
- **A Diagnostic Contribution:** Identifying the main fault lines of the twin transition and their implications for educational policy.

Presentation Roadmap – Three Layers of Asymmetry:

- Uneven Spatial Capacity
- Uneven Access to Opportunities
- Uneven Lived Experiences

ST4TE explores how the green and digital transitions impact inequalities across Europe, and how these transitions can be made fairer for all

Uneven Spatial Capacity: The Geography of Advanced Training

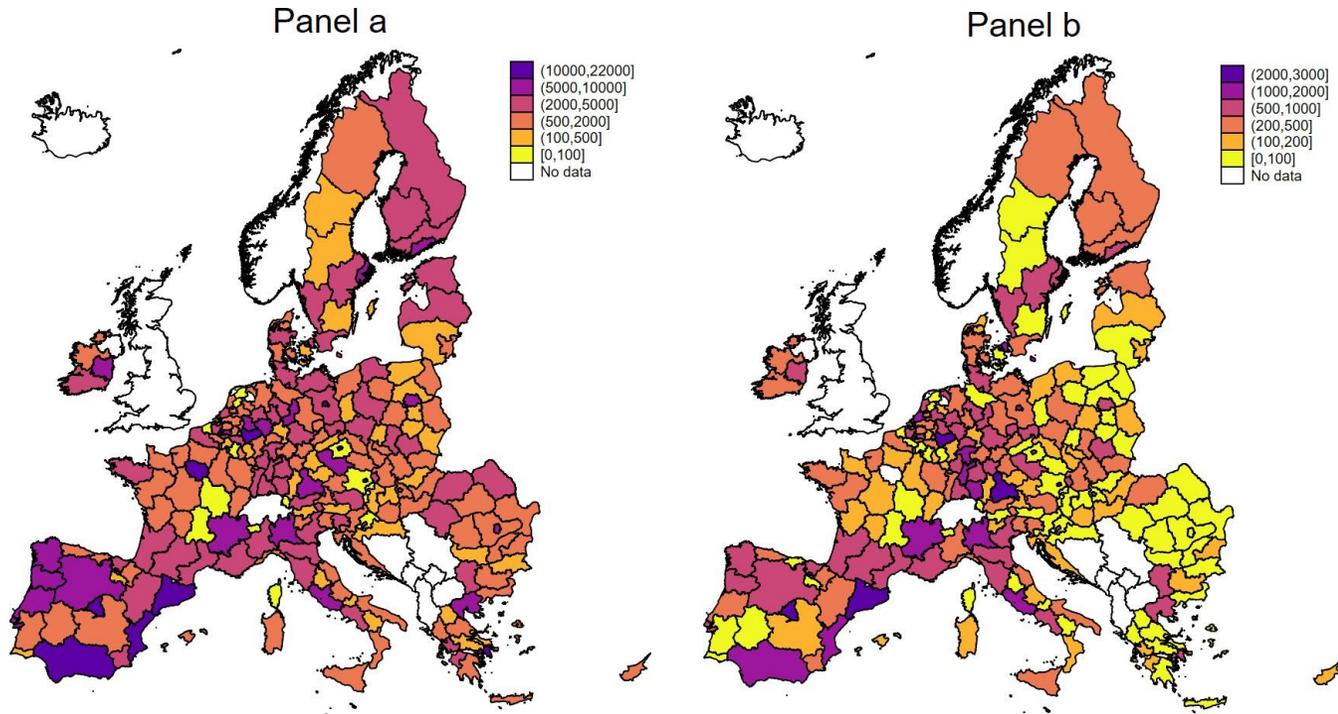

Figure 1: Regional average of the geographical distribution of PhD students (Panel a) and graduates (Panel b), 2020.

Source: Ascanelli, A. et al. (2025. p.15)

- Europe's main higher-education divide lies in advanced, not basic, access.
- **Doctoral training** is much more concentrated than undergraduate education.
- PhD students and graduates cluster in a limited number of **research-intensive regions**.
- This spatial concentration shapes where advanced twin-transition capabilities can emerge.

A just twin transition requires not only broad access to higher education, but a wider territorial distribution of advanced training and research capacity.

Uneven Research Ecosystems: Universities Do Not Play the Same Regional Role

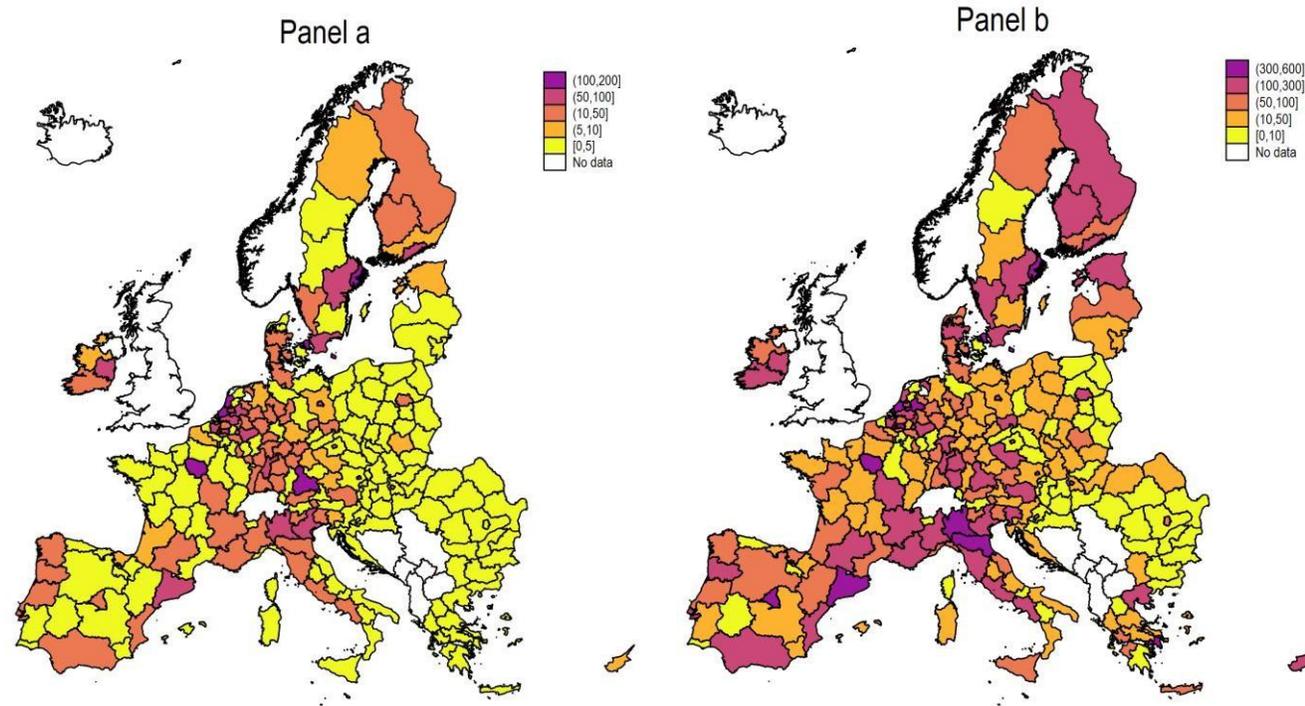

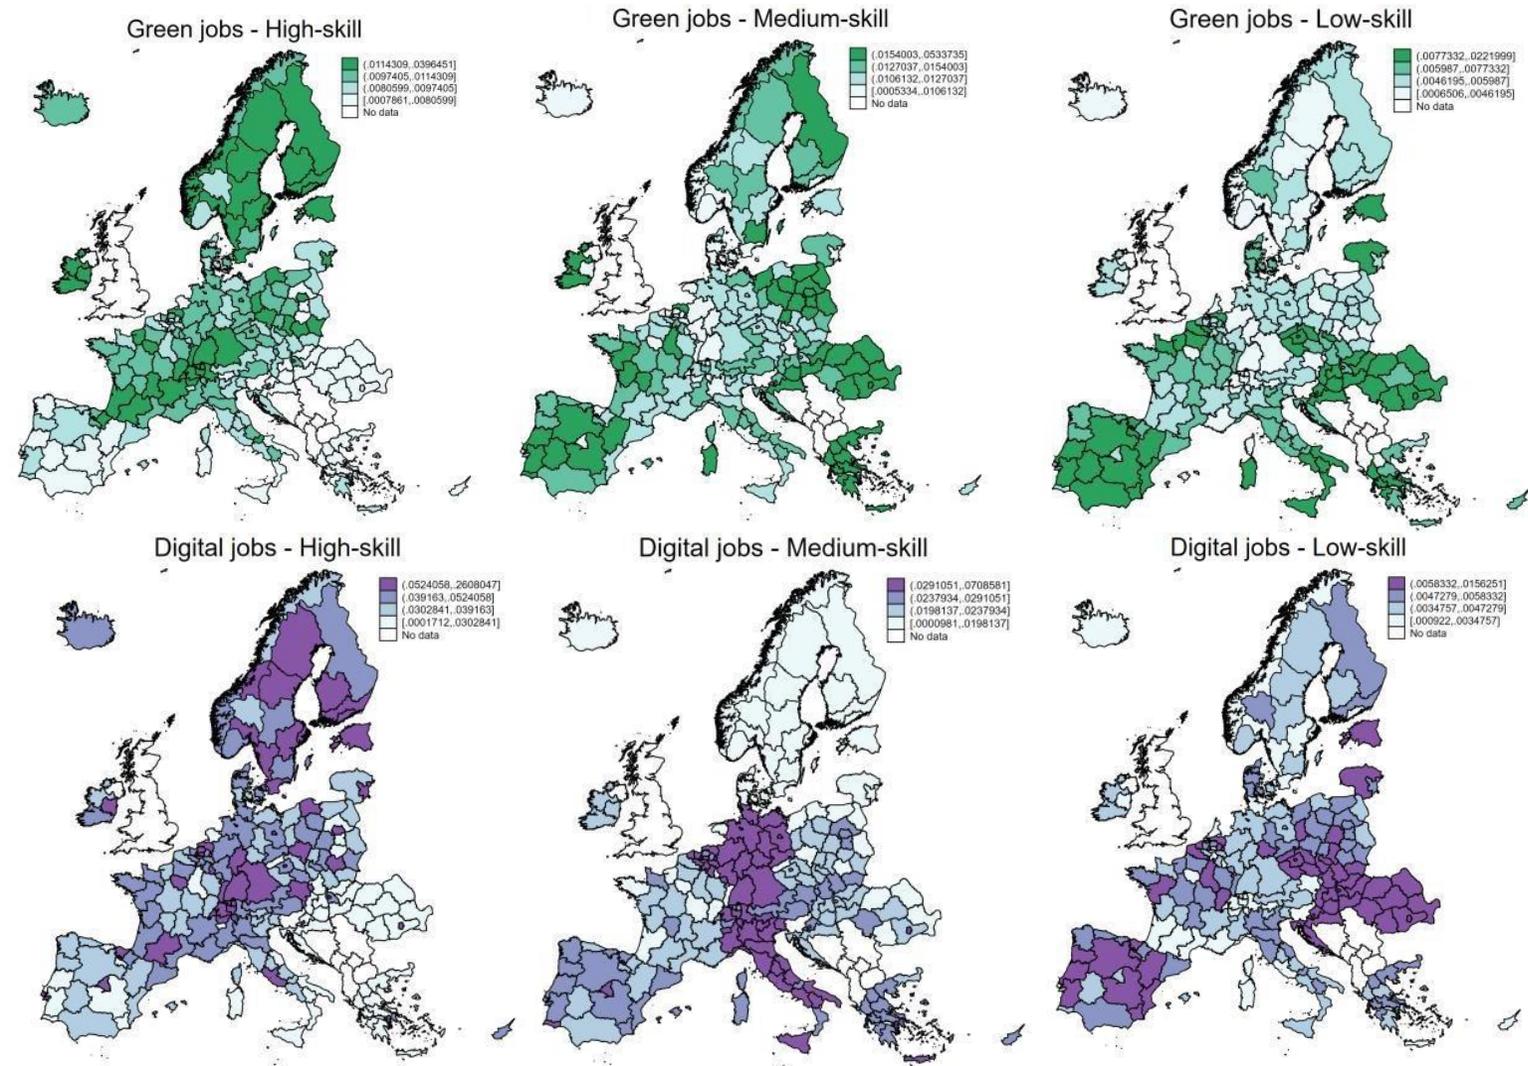

Figure 2: ERC project (panel a) and project in collaboration with companies (panel b), 2021. Source: Source: Ascanelli, A. et al. (2025, p.21)

The twin transition depends not only on the presence of universities, but on the uneven distribution of research intensity and innovation-system connectivity across regions.

- Higher education institutions are not only providers of skills; they are also key nodes in regional innovation systems.
- **Frontier research capacity is highly concentrated.**
- Collaboration with firms is more geographically diffuse, but it is still **skewed toward stronger and more innovation-intensive economies.**
- This creates a layered university landscape: some institutions mainly widen access to education, while others also anchor high-end knowledge creation and research-led regional transformation.

Uneven Opportunities: Green and Digital Jobs Follow Different Regional Pathways

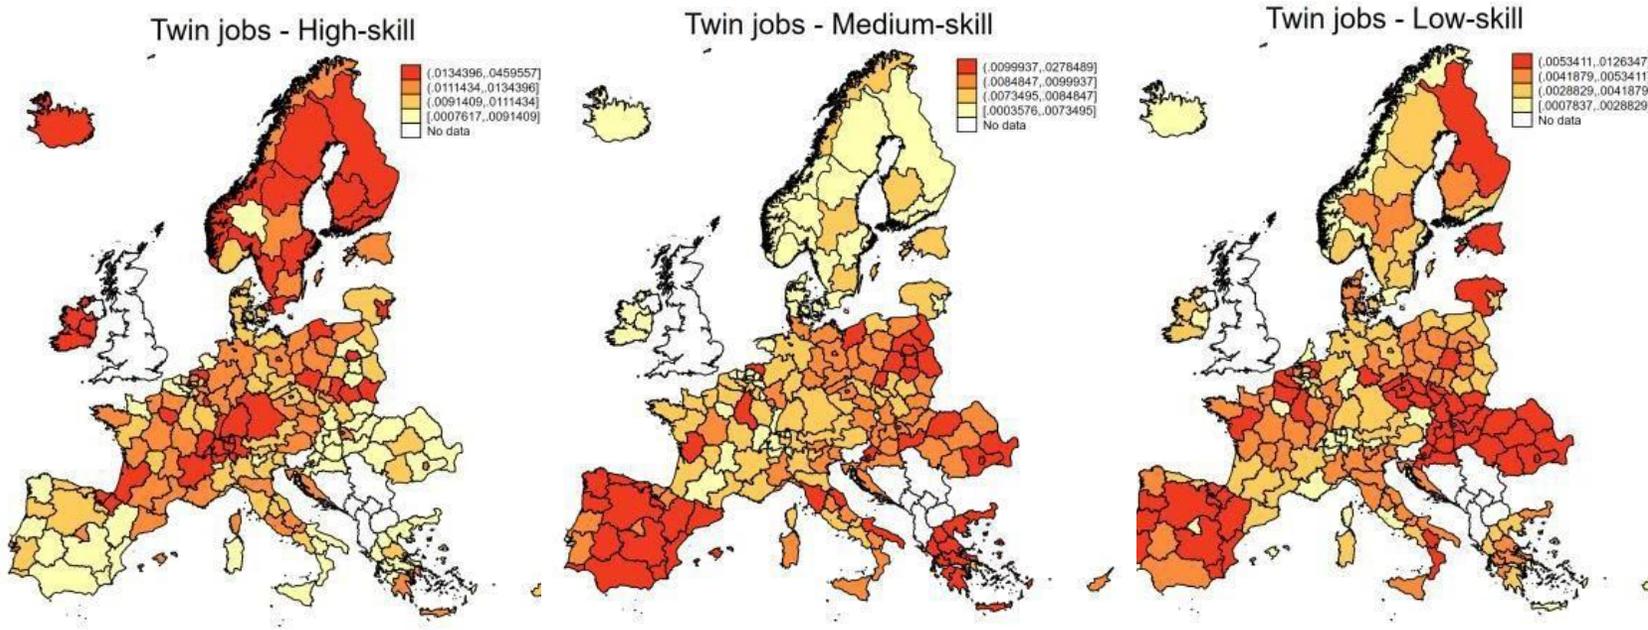

- Green and digital jobs follow different regional-skill pathways across Europe.
- **Green jobs** are broader across skill levels and more geographically dispersed, though often tied to lower- and medium-skilled sectors in parts of Southern and Eastern Europe.
- **Digital jobs** are more skill-selective and spatially concentrated, especially in high-skilled metropolitan and innovation-intensive regions

Transition opportunities are uneven: green pathways are broader, while digital pathways are more concentrated and selective

Figure 3: Regional distribution of green jobs by skill group. 2022.
Figure 4: Regional distribution of digital jobs by skill group. 2022.
Source: Ascani et al. (2025, p.46-47)

Unequal Access to Opportunities: Twin Jobs Emerge on Uneven Ground

The twin transition is emerging through uneven regional forms of hybridisation, with a clear skill-based core-periphery pattern

Figure 5: Regional distribution of twin jobs by skill group. Source: Ascani et al. (2025, p.49)

- Twin jobs do not erase the green-digital divide; they recombine it unevenly across Europe.
- High-skilled twin jobs cluster in Northern and Western Europe, while lower- and medium-skilled twin jobs are more prevalent in parts of Southern and Eastern Europe.
- : Beyond core 'twin' roles, universities must support '**Enabling Occupations**' - the administrative and technical support roles that facilitate technology adoption

Unequal Rewards: Transition-Linked Jobs Are Not Equally Positioned

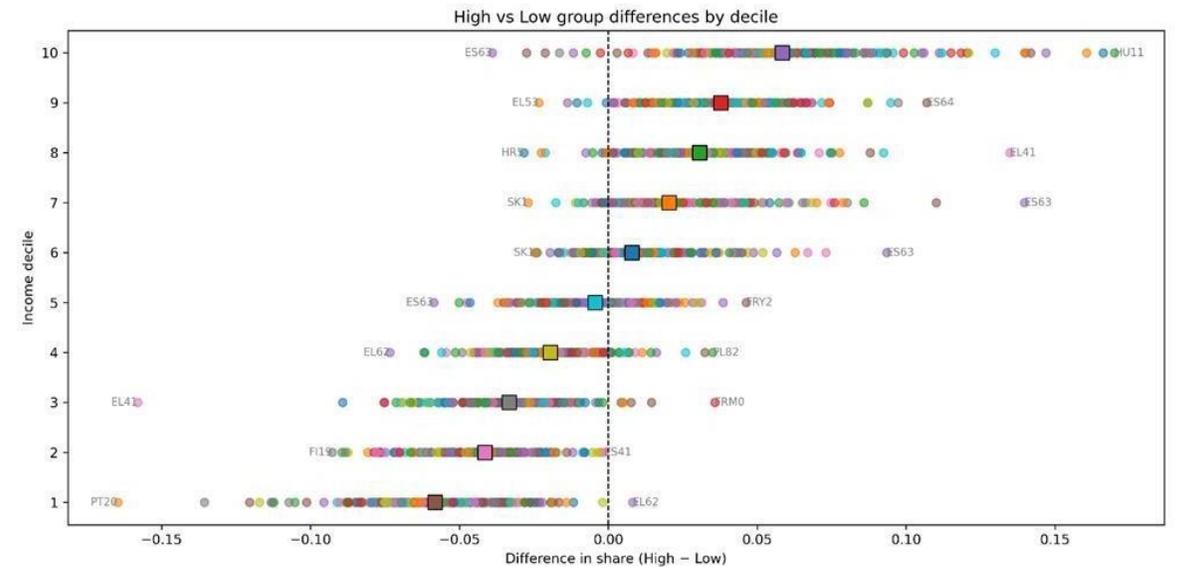

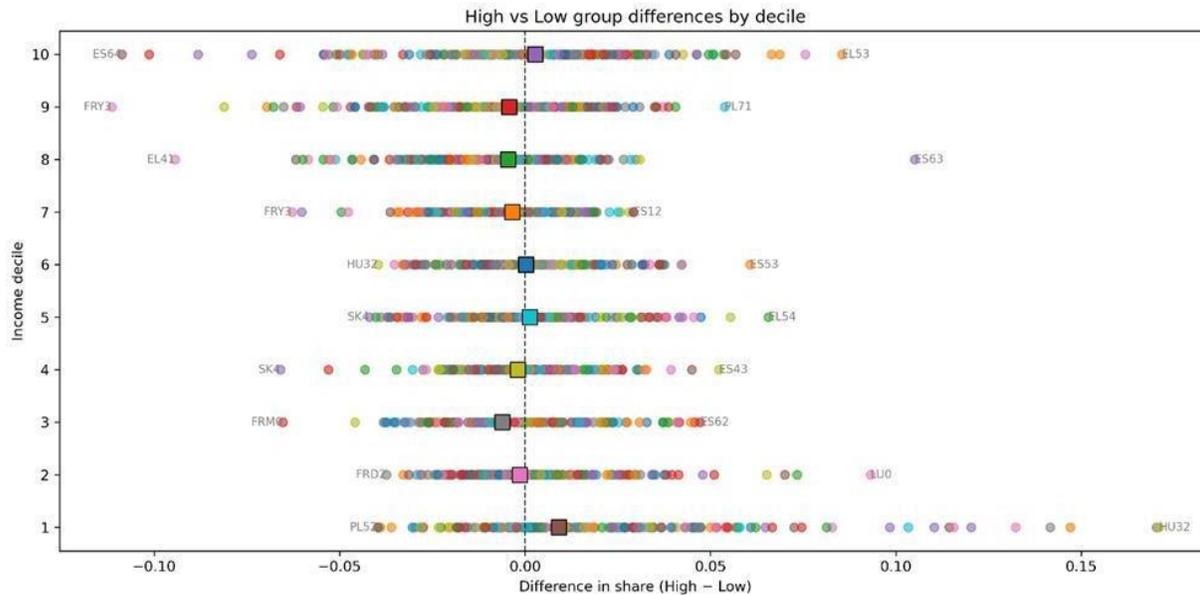

Figure 6. Differences in income distribution between high- and low-green exposure occupations by decile (regions)

Figure 7. Differences in income distribution between high- and low-digital exposure occupations by decile (regions) Source: Ascani et al. (2025, p. 38)

Source: Ascani et al. (2025, p. 38)

- Transition-linked jobs are not equally positioned in the labour market.
- Green exposure is more broadly distributed across income deciles.

- Digital exposure is more concentrated in higher-income segments.
- So the issue is not only who enters the transition, but who captures its higher rewards.

Unequal Job Quality: Flexibility and Security Remain Stratified

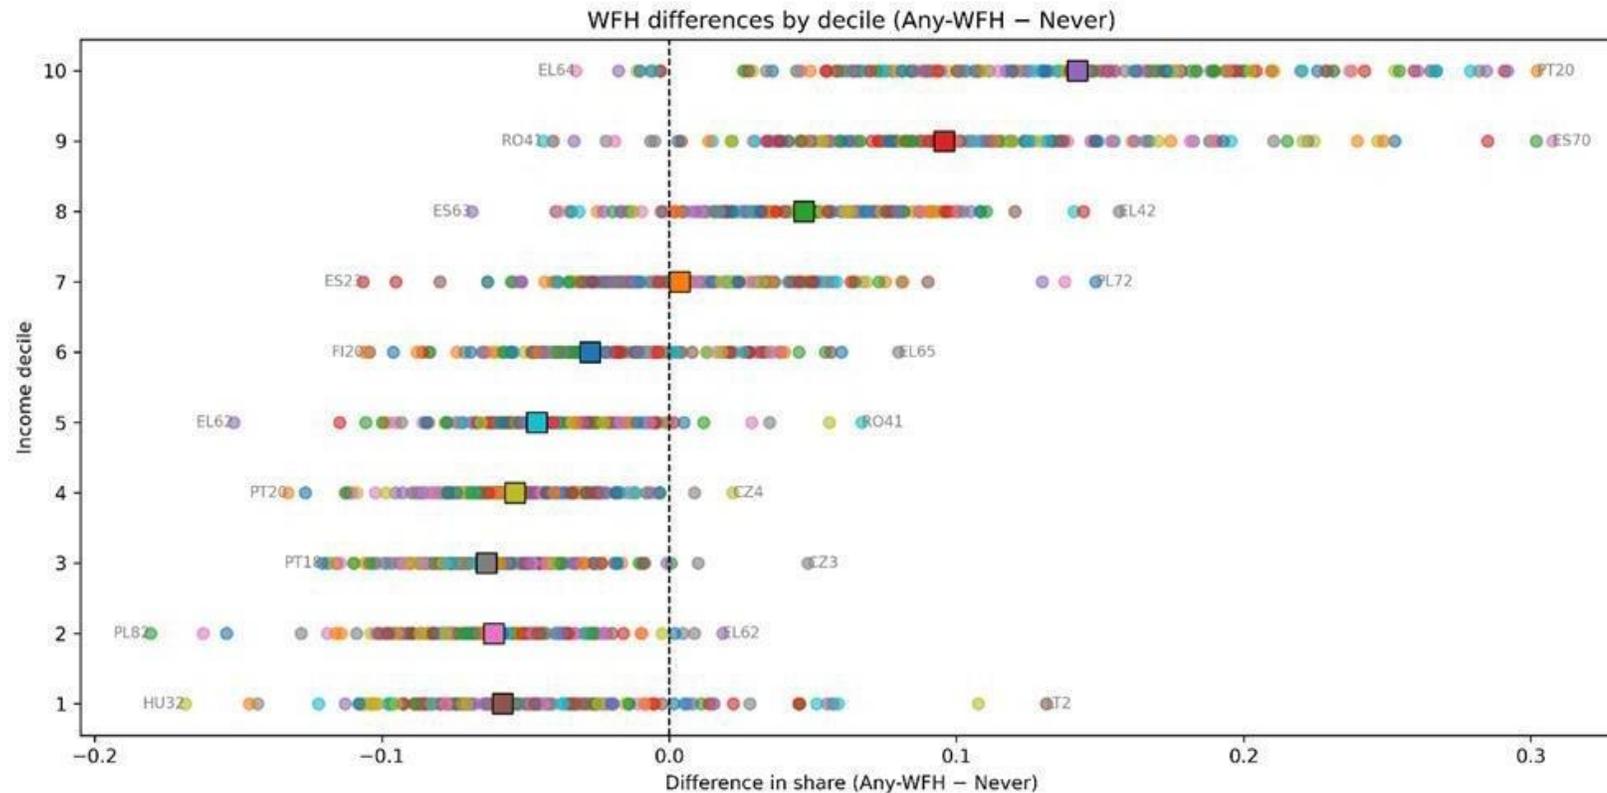

Figure 8: Work-from-home differences in income distribution by decile (Any-WFH vs Never, regions). Source: Ascani et al. (2025, p. 36)

- The issue is not only whether transition-linked jobs exist, but what kind of jobs people can access.
- Work-from-home access is concentrated in higher income deciles, while workers without WFH access are concentrated lower down.
- Temporary workers are also concentrated in lower deciles, pointing to unequal access to stability and security.
- So even within the transition, flexibility, autonomy, and security remain unevenly distributed.

Uneven Lived Experience: Choice vs. Compulsion

Green Transition

- More often experienced as **choice**
- **Value-driven** / moral
- Lifestyle and responsibility

Digital Transition

- More often experienced as **compulsion**
- Fast-moving / hard to opt out
- Dependency and pressure

Policy may speak of one “twin” transition, but lived experience remains fragmented

What Universities Must Do: Build Capacity, Anchor Regions, and Translate the Transition

- Universities shape who can participate in the transition – not only through degrees, but through postgraduate training, micro-credentials, reskilling, and lifelong learning.
- They must act as regional anchors, especially in weaker regions, linking local labour markets, firms, public actors, and place-based development needs.
- They must also translate ambitious transition goals into usable local pathways, connecting green and digital agendas across curricula, partnerships, regional missions, and public engagement.

A just twin transition needs universities that distribute capabilities more widely and make participation more inclusive across people and places

ANY QUESTIONS?

Morten Dæhlen

Professor at the University of
Oslo

Intervention 1

When Machines Think, the Planet Shouldn't Pay, Morten Dæhlen

- Professor in computational mathematics/informatics, primarily working on interdisciplinary issues related to artificial intelligence, machine learning, scientific visualisation and knowledge representation.
- In recent years, Dæhlen has especially engaged in research related to the digital and green transition (the twin transition) and how the health sector can utilise recent advances in methods and algorithms in artificial intelligence.
- Dæhlen has also served as Head of Department of Informatics (2005–2012) and Dean for the Faculty of Mathematics and Natural Sciences (2013–2020) at UiO.

Twin Transition – Understanding the Why and Building the How
CEI, Webinar March 5th 2026

UNIVERSITY
OF OSLO

What should be our
digital research and innovation
agenda to achieve a successful
green transition of society?

How can we ensure that the
«digital part of the world»
becomes greener?

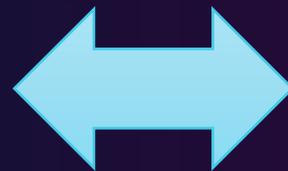

The twin transition

is about how the dynamics and strength of the digital transition affects the green transition of society, and how these two transitions mutually influence each other and should be combined in the coming years.

The digital transition

of society consists all processes at all levels in society producing and applying infrastructure, services, applications and human behavior that depend on digital representation of knowledge and computer power.

The green transition

of society is about reducing greenhouse gas emissions, preserving and restoring nature, reversing environmental degradation and ensuring that the energy of the future comes from renewable sources.
